How movies move

A movie is lots of still pictures,

one behind the other.

Each picture changes just a little.

Flip them fast and your eyes see motion!

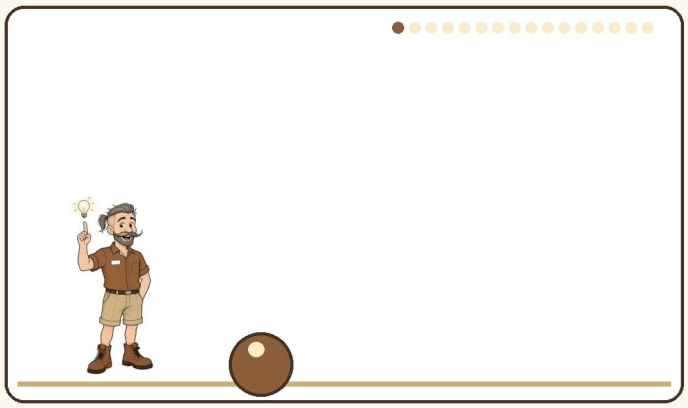

Make your flipbook:

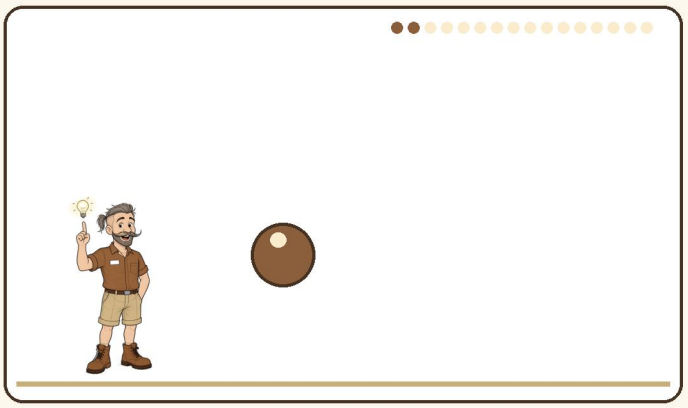

- **Print the frame pages**
- **Cut along the light lines**
- **Stack the frames in dot order**

  (fewest coloured dots on top)
- **Staple or clip the left edge**
- **Flip with your thumb and watch the ball bounce!**
